Technology Solutions for the Construction and Service Industries

## THE “EASE” IN COMPUTEREASE WAS THE DECIDING FACTOR

Wissehr Electrical Contractors thrive on “the tough ones”.

For over twenty years, they’ve tackled the most challenging electrical contracting projects, tending to do the tough, complicated jobs that other contractors don’t want. As a result, they have had to become innovative and adaptive.

That’s why when Wissehr needed to switch accounting programs, they looked for a product that mirrored their innovative and adaptive business philosophy.

*Software that’s Innovative. Powerful. Easy.*

“We were using Peachtree and knew it was time to move to a bigger product. But the other programs we looked at were so overwhelming”, says Jahne Kae Blattner, Office Manager for Wissehr.

“ComputerEase had a number of modules from which we could select that fit our specific needs and it is extremely user friendly. The Certified Payroll helped us to make our decision, as did the support program that comes with. “

The biggest improvement we’ve seen in our business since we’ve started using ComputerEase is in Job Costing. It’s very accurate and reports in real time. It helps to be able to know where the job actually stands and make adjustments before it’s too late.

*“As full-service industrial and commercial electrical contractors, we take on all kinds of projects, from the every-day to the extreme.*

*ComputerEase works for us — I’m sure it can help any other contractor as well. We’d recommend it to any business owner.”*

## COMMON SENSE SOLUTIONS MADE TRANSITIONING TO A NEW PROGRAM EASY

We started our implementation on October 1 and were completely transitioned and live on January 1. CSS’s segmented approach worked well for us. Every week we tackled a different piece of the business — we went through one-on-one learning with a trainer, continued with a tutorial on our own, and had homework assign-

ments to complete before moving on to the next segment. It was quick and much easier than we had expected.

Ongoing support is great, I particularly like the free webinars that are offered. We especially took advantage of them when we were new users. The information offered is very valuable. The

year-end webinars are helpful and we attend the user group meeting every year.

We keep up with the frequent updates to the system. It’s nice because I get printouts of what has changed with each update that I do. I know exactly what will be different and I’m never surprised after the fact.

Personally, I love the Practice Company feature in ComputerEase. It gives me the option of trying “what-if” scenarios first without doing any damage to our live company.
